## Projects

### 1. Customer Feedback Analysis Dashboard

Technology used: Streamlit, Python, TextBlob, Seaborn

- Built an interactive dashboard using Streamlit to visualise customer feedback with real-time filters and sentiment analysis.
- Designed a clean UI with charts, image embeds, and multi-column layouts for enhanced user experience.
- Integrated NLP (TextBlob) and data visualisations (Seaborn, Matplotlib) for insightful frontend analytics.

### 2. StrayConnect - Location-Based Stray Animal Rescue Platform

Technology used: React.js | Supabase | Tailwind CSS | n8n

- Developed a responsive web app to connect users with nearby NGOs and vets for rapid stray animal rescue.
- Integrated real-time location search, NGO/vet profiles with maps, and donation support using Supabase backend.
- Automated rescue alerts and donation notifications using n8n workflows for faster response and engagement.
- Designed a role-based dashboard with forums, rescue updates, and rating systems to promote transparency.
